The Systems Modeling Language (SysML) is a general-purpose modeling language for systems engineering applications. It supports the specification, analysis, design, verification and validation of a broad range of systems and systems-of-systems. SysML was originally developed by an open source specification project, and includes an open source license for distribution and use.

Construction safety is a national and worldwide issue. This paper contributes in solving this problem by applying automated safety rule checking to Building Information Models (BIM).

Building Information Modeling (BIM) and Safety: Automatic
Research Activities: I am interested in algorithms and interfaces for improved information retrieval, as well as general issues in human-computer interaction.

Susan Dumais Homepage
Pick/Pack 2 Order Consolidation: This method groups orders by destination or by customer.This has the benefit of pulling product for multiple orders in a single pass through the pick area. Wave: A wave is an automated grouping of orders by a specific set of criteria so that these orders are released to the pick area as a group.

A MODEL FOR COMPETENCE GAP ANALYSIS - L3S
The phases in the rapid application development (RAD) model are: Business modeling: The information flow is identified between various business functions. Data modeling: Information gathered from business modeling is used to define data objects that are needed for the business. Process modeling: Data objects defined in data modeling are converted to achieve the business information flow to ...

What is RAD model- advantages, disadvantages and when to
What are Unified Modeling Language (UML) Software. The Unified Modeling Language (UML) Software provides a general-purpose, developmental, modeling language which is intended to provide a standard way to visualize the design of a system.

RPC Rod Pump Controller Provides economical pump-off control of sucker-rod pumping systems. Using sophisticated modeling and control software and a powerful digital signal processor (DSP), the RPC controller computes surface and downhole conditions to best regulate the starting and stopping of the pump via a separate motor controller.
