Radar is a detection system that uses radio waves to determine the range, angle, or velocity of objects. It can be used to detect aircraft, ships, spacecraft, guided missiles, motor vehicles, weather formations, and terrain. A radar system consists of a transmitter producing electromagnetic waves in the radio or microwaves domain, a transmitting antenna, a receiving antenna (often the same ...

Q-Eye Radar MT is an extremely versatile flow measurement system designed for continuous operation and suitable for measurements of flows not only in rivers and open channels, but also in municipal wastewater and storm water sewers. Compact construction combined with the contact-free measurement principle enables an easy installation and use. The ultrasonic depth sensor operates by energizing ...

A multistatic radar system contains multiple spatially diverse monostatic radar or bistatic radar components with a shared area of coverage. An important distinction of systems based on these individual radar geometries is the added requirement for some level of data fusion to take place between component parts. The spatial diversity afforded by multistatic systems allows different aspects of ...

Variability. Most phenomena change over time and space and propagation is no different. Propagation in the troposphere is often strongly influenced by the weather and time variability is significant, for example a rain attenuation event will only happen if it is raining, this only happens for about 5% of the time in England.

Ham software review. After have reviewed more than fifty HF propagation prediction programs and associated tools, and close to seventy astronomy and imaging-oriented programs, we are going to review applications dedicated to radio amateur activities. They include spectrum analyzers, satellite tracking programs, Morse code trainers, DX atlases, CAT, multi-mode decoders, and other logging programs.

Un lidar est un système opto-électronique composé d'un émetteur laser, d'un récepteur comprenant un collecteur de lumière (téléscope ou autre optique) et un photodétecteur qui transforme la lumière en signal électrique, ainsi que d'une chaîne électronique de traitement du signal qui extrait l'information recherchée.
