petrol, hence the petrol vapourises quicker than diesel oil in the engine cylinder. This helps in easy starting of petrol engines. Calorific value: The heat liberated by combustion of a fuel is known as calorific value or heat value of the fuel. It is expressed in kcal /kg of the fuel. The heat value of a fuel is an important measure of its worth,

fluorine. Here we will limit our attention to combustion of a fuel with air or pure oxygen. Chemical fuels exist in gaseous, liquid, or solid form. Natural gas, gasoline, and coal, perhaps the most widely used examples of these three forms, are each a complex mixture of reacting and inert compounds. We will consider each more closely later in ...
