Dear Mr. Parmar, While I appreciate your article on significance and selection of vector group of Transformers, pl. let me know in a co-gen power plant where export/ import of power is envisaged, if the vector group YnD1 where in Generator Power Transformer's secondary winding is Delta connected ( Generator side) and the distance of generator is within 100 meters from the stated transformer ...

**Vector Group of Transformer | Electrical Notes & Articles**

Points to be consider while Selecting of Vector Group. Vector Groups are the IEC method of categorizing the primary and secondary winding configurations of 3-phase transformers. Windings can be connected as delta, star, or interconnected-star (zigzag).Winding polarity is also important, since reversing the connections across a set of windings affects the phase-shift between primary and secondary.
